

Robby Knows Buildings

Expertise as Solid as Concrete

Robby “Rob” Ward’s extensive background with self-performed concrete work has made him an impressive consultant. Robby’s knowledge of structural drawings and attention to detail during site investigations allows him to identify construction components that were not executed according to plan. He understands how long it takes, how much it should cost, and what materials it would require to perform the job well throughout all stages of construction, from creating shop drawings to the coordination and execution of those plans onsite.

Building Rehabilitation

The rehabilitation of historic buildings to meet modern codes is complicated, and often results in an insurance claim or case when handled by a construction professional without the proper experience. Robby is unphased by even the most difficult rehabilitation claims that require familiarity with ADA code compliance thanks to his extensive experience renovating older buildings of all kinds. Robby Ward’s specialty experience handling all types of existing conditions in historic renovations has made him a powerful resource in the allocation of responsibility for these complex claims.

Contract Claims

Robby’s portfolio of work has made him particularly comfortable with contract claims. He loves performing schedule delay analysis, utilizing his experience organizing project documents, and managing budgets to expertly piece together the facts in construction projects that have failed to meet expectations. Robby’s extensive experience is complemented by his ability to curate relationships with the parties involved, facilitating a deeper understanding of the case or claim at hand. Clients can confidently rely on Robby to navigate complex building problems with integrity, delivering solutions tailored to the unique needs of each case or claim.
